EMEREEEG

Grant Agreement no. 605103

EmerEEG

A portable device for early detection and treatment of traumatic brain injury based on advanced qEEG and HDTES to prevent major health problems and especially for use in emergencies and telemedicine

INSTRUMENT: Research for SMEs

OBJECTIVE: FP7-SME-2013

D8.1: Project Web Site with Continuous Updates

Due Date of Deliverable: 30th November 2013

Completion Date of Deliverable: 30th November 2013

Start date of project: 1st October 2013 Duration: 24 months

Lead partner for deliverable: Smartbrain

Revision: v1.0

Project co-funded by the Research Executive Agency of the European Commission within the 7th Framework Programme (2007-2013)

Dissemination Level

PU	Public	✓
PP	Restricted to other programme participants (including the Commission Services)	
RE	Restricted to a group specified by the consortium (including Commission Services)	
CO	Confidential, only for members of the consortium (including Commission Services)

Table of Contents

1. Introduction	4
2. Web site structure	4
3. Conclusions	6

1. Introduction

The EmerEEG project is based on the idea of developing a portable medical device for objective and reliable emergency diagnosis of Traumatic Brain Injury (TBI) and a monitored personalized treatment based on qEEG (quantitative electroencephalography) and HD-TES (High-Definition Transcranial Electric Stimulation).

The current deliverable is the first deliverable from *WP8 Innovation Related Activities*, and it describes work to make the public aware of the project through a publically accessible web site:

www.emereeg.com

The current document only contains an overview and snap-shots of the web site structure. It is the objective to continue to add and update content during the course of the project.

2. Web site structure

The project has secured the web address www.emereeg.com, and will use this for the dissemination of project results. The current web site is used exclusively for public purposes; for project confidential work, a separate file storage and sharing system have been selected.

Figure 1 shows the home screen of the web site. The image illustrating the brain cross-section is one out of several project relevant images constantly changing.

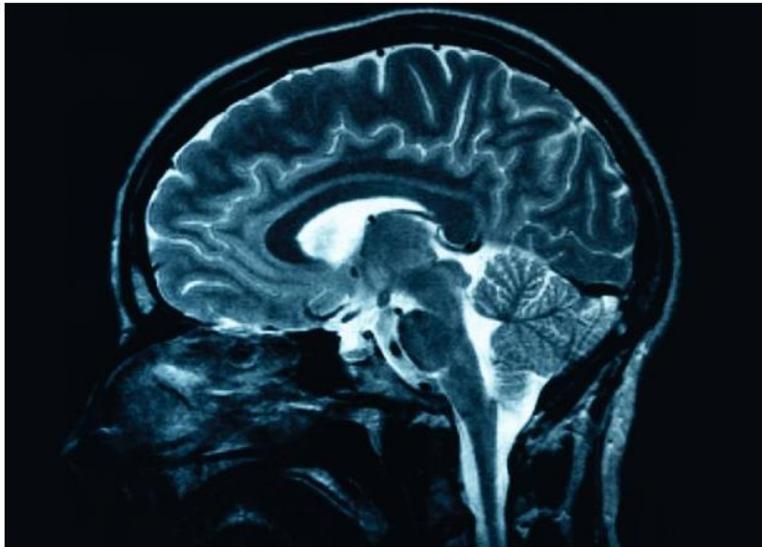

Figure 1: Current home screen at www.EmerEEG.com

Next to the EmerEEG logo at the top, there are clickable links where further project information can be found. Specifically, at the day of web site launching, the following structure is envisioned and partially completed:

- Go to website home page (press EmerEEG logo)
- About EmerEEG
 - o The Goal
 - o Scientific Methodology
 - o Work Packages
 - o Social Impact
- The Consortium
- Management Structure
- Publications
 - o Public Deliverables
 - o Scientific Publications

PUBLIC

- Media Center

For further information on the web site, the reader is requested to consult the web site.

3. Conclusions

Deliverable 8.1 outlines work to establish the project public web site. The web site will be used for project dissemination and marketing of project results, and will be updated throughout the project duration. A brief description of the content is given. For further details, the reader is referred to the web site at www.emereeg.com.
